

Securing IT Compliance

confident and will have a ready-built team of data security experts protecting your networks, servers, databases and applications.

In today's environment, the biggest threat to your business isn't always the competition. You have to know what your employees, vendors and contractors are doing with your clients' sensitive data while making sure you are in compliance with new and challenging government regulations. With Quest's Managed Security Services you'll feel

Quest's experience working with financial institutions has helped us establish a successful methodology for safeguarding customer information. We provide an organization's executive management with reliable time-to-implement and competitive cost. Quest's security services are designed to offer you the most effective means to achieve GLBA compliance.

SB 1386

Quest can ensure you are in compliance with SB 1386 by determining what personal information is stored in unencrypted form in company databases. We also review your data security systems and policies to determine whether they reasonably protect against unauthorized access.

Recent statistics show that over 70% of misappropriated computerized data is taken by current employees. Quest can help you secure internal documents and Email at directory, server and/or individual item levels while ensuring you are in compliance with archiving and storage requirements.

HIPAA/Medical

Quest's Gap Analysis (differences between the current system and the HIPAA requirements) provides detailed information needed to make informed decisions at the senior management level regarding risk acceptance, remediation and budget allocation. We regularly perform Risk Assessments, Risk Analysis, and System Activity Reviews for some of the world's leading medical providers.

Future Compliance Regulation

We can predict with some accuracy what new regulations may arise. Current regulations are a great indicator of future legislation. And each compliance requirement has corresponding implementation specifications. Quest can be counted on to provide you with the data necessary to determine what policies/implementations need to be addressed immediately and which can be addressed at a later date. By enforcing strict security guidelines and policies based on Quest's expert recommendations, you can secure your IT compliance now and into the future.

How valuable is your data?

We both know the answer. With your livelihood at stake, Quest tailors our Managed Security Services to fit your specific needs—rather than trying to squeeze you into a modular structure of set services. Our portfolio of Managed Security Services reaches across your enterprise. Where you are assured seamless integration within existing systems, policies and procedures. Whether you elect stand-alone assessments, ongoing remote or on-site monitoring, or system-specific knowledge transfers, your valuable data will be safe.

Only 40% of organizations are confident they would detect a systems attack. Are you?

GLBA/Financial

Quest's Remote Intrusion Monitoring solution is a key aspect of meeting data-protection requirements within the GLBA privacy legislation provision. Financial institutions and e-commerce companies implement generally accepted standards of technology and operational security to protect personally identifiable information, however, it is virtually impossible for an organization's internal staff to monitor its own network and identify performance anomalies. Our Remote Intrusion Monitoring services provide an effective and efficient 24/7 diagnostic and preventative approach.
