

Meet increasing demands

The pressure is on. Most IT leaders are wearing two or three hats to try and stay on top of every security threat, improve customer service, decrease time-to-market, manage applications and help grow the business with limited staff and budget. Lighten your load – delegate one or two of those technology hats to Quest, a proven leader. We provide technical project management expertise – the kind you only get from years of experience. We validate and fine-tune your current in-house IT practices, and return valuable time back to you.

We combine people, processes and technologies. From the moment you engage Quest, the difference is clear. Our project managers live and breathe your IT strategic priorities. Scheduled deliverables meet and exceed your time-lines, and documentation is thorough and easy to comprehend.

Professional Services

Take advantage of the best in current and emerging technologies. With Quest, you get the talent and experience to fulfill your needs, including:

- **Technology Consulting:** Optimizing your existing infrastructure, systems, processes and procedures
- **Project Management:** Bringing all elements of your project together for a successful completion
- **Staff Augmentation:** Working as a member of your team and under your direction in order to achieve your organization's goals

System Engineering

- **Operating System & Platform Migration:** Design, install, test, tune, and deploy new or upgraded platform or OS on both client and server sides for any type of platform (Windows, Unix, Linux, Mainframe, etc.) to improve stability and performance
- **Email Management:** Design, install, deploy, and maintain your mail systems, while addressing potential issues such as spam and content filtering
- **Business Continuity & Disaster Recovery:** Safeguard your data and systems in the event an interruption causes you to seek data changeover, recovery or retrieval
- **Email Archiving/Backup Services:** Safe, secure and in compliance with new business regulations. Quest's email archiving solutions protect your business and ensure data recovery.

Applications

We dig deep to identify and analyze all facets of your network to ensure the smooth flow of your critical information:

- **Applications Programming & Development:** Application integration, maintenance and development; legacy infrastructure or new technologies and platforms
- **Business Process Analysis:** Gather and analyze business, technology, and operational requirements; develop system architecture and complete system design
- **Web Development:** Intranet and Extranet

Infrastructure Services

Quest provides end-to-end networking solutions including design, installation, deployment and maintenance in the following areas:

- **Design:** Maximize the potential of LAN/WAN/MLAN/SAN, VoIP, and Video Transport technologies to facilitate the exchange of information
- **Network Assessment:** Obtain optimal performance with existing network gear, and prepare your infrastructure to support future business objectives
- **Trending & Capacity Management:** Track and record data pertaining to network performance
- **Security:** Quest's years of regulatory compliance and best practices expertise will help you implement policies and procedures that guide your response in the event of a network disruption
- **Wireless Assessment:** Conduct a high-level review and receive an interactive, customized, wireless network management and maintenance plan
- **Telecom Audit:** Get an eye-opening perspective on your telecommunication-related services and significantly reduce monthly rates
