

One source for all your storage needs.

Storage

Access to data is the lifeblood of an organization.

Internally, the demand is for shared files, databases, and data mining 24x7. Externally, customers and employees must have the ability to access data any time and any place. The environment must have the flexibility, scalability, and security to seamlessly grow with the demands of everyday business.

Whether your concerns are real estate in the data center, resource utilization, data backup, or business continuity or compliance, you can reduce risk and increase business productivity with Quest's expertise. We can help you design and implement storage solutions that are cost effective, flexible, and scalable – as big or small as you need.

With offerings that include services and products from leading manufacturers, we review and recommend the exact solution to meet your needs and deliver industry leading, multi-protocol solutions from a vendor-neutral perspective.

Professional Services

- Storage and Backup Assessment – A comprehensive, unbiased analysis of your storage and backup environment that helps discover untapped resources, optimize performance and data integrity, and develop a roadmap for future storage planning initiatives
- Business Continuity Recovery Planning – Safeguard corporate assets and communications and ensure fast and efficient data backup, recovery, and retrieval in the event of a disaster

- SAN Installation Services – With a rapid and efficient deployment of your SAN solution—from design to integration with your business systems—you realize quick return on your SAN investment with minimal disruption to your organization
- Application Solutions – We partner with leading manufacturers to deliver multi-protocol products and solutions, including SAN, NAS, Fibre Channel, ISCSI, and WAN
- Email Archiving – Safe, secure, and in compliance with your company's retention policies, Quest's email archiving solutions protect your business and ensure rapid recovery of needed email
- Exchange Solutions – This is a proven methodology for consolidation, migration, replication and deployment of Exchange, server and storage environments
- Server and Storage Optimization – Make better use of your storage by uncovering available or unused capacity and enhancing overall performance

Managed Services

Be confident that your systems have successfully backed up and that your email is available when you need it. At your site or ours, we provide network, storage, and security monitoring and management services including:

- Co-location and Data Warehousing
- Backup and Recovery (Tape or Vault)
- Email Archiving
- Disaster Recovery

Quest's state-of-the-art Network Operations Center (NOC) is a secure, 24x7, climate-controlled, and seismically neutral environment. Determine the degree of control over your mission-critical data availability, security and performance needs and remain free to focus on your business goals.

Today's storage, server, and infrastructure technologies are as diverse as the environments they serve. Put our team to work for your business. We can help you design and implement the right technologies and solutions for your organization.
