

IP Video Surveillance: Protect your Assets

Affordable protection

Security is everyone's business. Whether you are interested in protecting your employees or safeguarding your assets, IP Video is a technology you can trust to be effective, reliable and affordable. And since IP Video is highly configurable, you may be able to use any existing cameras in conjunction with current network hardware to prevent large startup costs.

24 x 7 Security

With the advent of the Internet and standardized video formats, IP Video has come into its own. **No complex software to learn**—live feeds from multiple cameras across various locations can be viewed in a standard Web browser. Using wireless technology, cameras are no longer restricted to the length of a cable, they can be placed indoors or outdoors in strategic locations that offer the most effective protection. You gain complete area coverage and security with minimal investment.

IP Video. A better solution

Tapes are going the way of the dinosaur. They're bulky and take up far too much storage space. In fact, most people don't keep tapes around. They reuse them

after only a couple of days. When law enforcement needs to view the tapes, they have often been recorded over or misplaced. Digital video can be stored on a hard drive, tape backup or other recordable media like CDs and DVDs, making them easy to store and retrieve.

Versatile

Where should IP Video technology be used? Anywhere heightened security can prevent problems:

- Schools—Outside buildings to prevent graffiti and vandalism. And to protect student population
- Data Centers—Using motion detection to prevent security breach
- Casinos—Prevent cheating, monitor staff
- Banks—Protect customers and employees
- Hospitals—To ensure patient privacy and safety
- Retail—Prevent theft, disprove unsubstantiated injury/loss claims

Advantages of IP Video:

- Superior quality—Digital IP video is vastly superior to analog video
- Can be broadcast live anywhere in the world
- Highly compressed for better storage
- Multiple media formats (Hard drives, DVD, CD, Tape)
- Flexibility—zoom, pan, adjustable frame rates, etc.
- Monitor multiple cameras in various locations
- Additional functionality—Time and date stamps, motion detection, alarm messaging, and more
- Highly stable and reliable

Consider This:

You probably wouldn't attempt to install a security system on your home by yourself. You would most likely contact a professional to recommend which system is best to protect your home and family. When considering a surveillance system, you need to make sure the professionals you work with have a solid understanding of not only IP Video, but also of networking, security, storage and wireless technologies. You wouldn't trust your home security to amateurs. Don't trust the security of your business to anyone but Quest.

Trust our experience

Quest's experience installing and supporting numerous IP Video solutions works to your advantage. When you work with Quest, you have a partner that has been at the forefront of technology solutions for over 25 years. Our professionals are well versed in both video and networking technologies, providing you with security expertise you can trust. Discover the benefit of working with a partner you can trust to hold your objectives and requirements

For security made simple and painless. Engage Quest.
