

Wireless Review

Whether the issue is the number or location of access points or your network infrastructure, a **Quest Wireless Review** provides the answers necessary to enhance and secure your wireless network.

Building a successful, secure wireless network entails careful planning, implementation, and support. Quest will supply you with the knowledge and information required to make your wireless services stable and secure.

Quest will work with you to...

Review

- The number of users on your network
- Your required bandwidth
- Current equipment and requirements
- Applications used on your network
- Your timeline and budget

Your wireless network is a crucial part of your work environment that needs regular review so you can keep pace with constantly increasing business demands

Planning, implementation, and support:
We provide the knowledge to build and maintain your wireless network

Identify

- Current wireless networks and access points
- Channel utilization
- Noise interference
- Number of users per access point

Analyze

- One access point set to test signal levels at multiple locations
- Current cabling infrastructure
- Available ports on your patch panel and switches

Following the Wireless Review, you'll receive a comprehensive report with key data point, access point recommendations, a heat map highlighting signal strengths, and a proposal for next steps.

Quest's Wireless Review includes one location, up to two floors, or 20,000 square feet.
