

End-to-end communications

Data, Voice, Fiber-optics, Wireless, Cable TV and Broadband When you answer the phone or reply to email, it's easy to forget there's a network of wires, cables and signals turning these commonplace actions into communication. Since 1990, Quest has installed more than 10,000 miles of underground coaxial, fiber-optics and twisted pair cable for our telecommunications, business, government, and education clients.

Every connectivity solution – Worry Free. Fast, flexible, dedicated, real-time and wireless are all a permanent part of the communications landscape. Our team has experience that predates today's convergent technologies and you'll find us outside, inside, underground and aboveground, building physical and electronic pathways for end-to-end communication – worry free.

Quest is one of the leading sources for telecommunications and network infrastructure design and implementation in the nation.

Engage Quest for complete consultation, design, installation and deployment.

Broadband Services:

- Cabling and conduit for high-speed Internet access inside Single and Multiple Dwelling Units (SDU/MDUs)
- Design and installation of cable and underground conduit systems
- Splicing of coaxial and fiber-optics cables and provisioning of as-built drawings

Wireless Services:

- Point-to-point, building-to-building connectivity and internal wireless LANs
- The elimination of WANs with 100 megabit, full duplex LAN-to-LAN
- Onsite wireless assessments of your environment

Design Services:

- In-house RCDD (Registered Communications Distribution Designer) support
- Drafting and Estimating
- Documentation
- Site and Bid Specs
- Development in Design Standards

Construction Services:

- Trenching
- Conduit Infrastructure
- Data closets
- Cat5e, Cat6, Wireless, Fiber-optics and CATV
- Various low voltage & wiring
- MDU/SDU Installation

Complete integration. When you engage Quest for telecommunications and network infrastructure projects, you benefit from a broader team that includes technology consultants, project managers, engineers and product specialists. You'll find that Quest offers a fully integrated approach and considers the needs of your entire organization.

As a result, Quest is one of the few companies that can offer you the complete incorporation of legacy systems as easily as the installation of new, state-of-the-art communications technologies.
