

Custom security services for your networks, servers, databases and applications

In today's environment, the biggest threat to your business isn't always the competition. You have to give reasonable consideration to viruses, hackers and data thieves. With Managed Security Services from Quest, you have a ready-built team of security experts protecting your networks, servers, databases and applications.

How valuable is your data? At Quest, we know the answer. We recognize your business is at stake, which is why Quest tailors our Managed Security Services

to fit your specific needs – rather than trying to squeeze you into a modular structure of set services. Our portfolio of Managed Security Services reaches across your enterprise. As a Quest client, you are assured seamless integration within existing systems, policies and procedures, whether you elect stand-alone assessments, ongoing remote or on-site monitoring, or system-specific knowledge transfers.

Only 40% of organizations are confident they would detect a systems attack. Are you?

Our Incident Protection Services*:

- **Managed Network and Host Intrusion Detection Service** remotely monitors network traffic 24/7
- **Enterprise Reporting** provides executive and technical reporting for all platforms
- **Event Correlation** consolidates all your security logs into one common report
- **Security Posture Assessment Service** regularly assesses the vulnerabilities of IT infrastructure
- **Enterprise Managed Firewall Service** delivers cost-effective enterprise firewall protection and reporting
- **Quest's Security Response Team** instantly detects and responds to potential security breaches

Enhanced Incident Protection Services*:

- **Computer Security Incident Response Development, Planning & Management Service** provides full scale IPS development through per-incident response and recovery services in cases of security breach
- **Client VPN Design Service** establishes secured network resources across your organization
- **Managed Site-to-Site VPN Service** creates efficient trust relationships between online business operations communicating across multiple networks
- **Managed Email and OS Anti-virus Service** protects your infrastructure using a remotely managed anti-virus gateway
- **Managed Web Filtering Service** monitors and records access to your Internet resources and Web site addresses
- **SPAM Filtering** provides monitoring and multi-layer filtering of email traffic ensuring protection from virus attacks, wasted bandwidth and loss of proprietary information
- **Patch Management Service** proactively and automatically detects, identifies, applies and tests appropriate patches across the enterprise

Discover the benefits of complete confidence. When you choose Quest for Managed Security Services, you provide your organization with more than a fortified frontline backed by the latest research, tools and leading-edge technologies. You provide your organization with dedicated knowledge and expertise focused on your organization's security preparation, protection, detection and incident response.
