

Infrastructure and Licensing Health Check

Evaluate your current infrastructure and licensing to ensure your IT environment is ready to meet the challenges of a growing business while reducing the financial impact of the new licensing models.

Infrastructure and Licensing Health Check:

Non-Invasive Data Collection

Ensure your technology platform is optimized while simply going about your business. Quest begins by installing our cloud-based virtual appliance on your network, where it will engage for one week in a reiterating multi-step process that includes discovery, inventory, asset review, active testing deployment, performance collection, and review. Each step involves discrete tasks and analytics checks, affording you valuable technology performance metrics.

Practical Data and Documentation

When the data collection and assessment process is complete, Quest will produce a report detailing how you can improve your technology performance while keeping licensing fees in check. We'll review the report and lay out a recommended best course of action so your infrastructure meets your business requirements as cost-effectively as possible. Key assessment results include, but are not limited to:

- Inventory of your infrastructure and software components
- Tech performance metrics - and how these stack up against thousands of other organizations
- TrafficSim: VoIP, HD video, and VDI traffic testing - so you have solid baseline metrics for how your network handles these traffic types

Considerations for the Future

Quest's Infrastructure and Licensing Health Check helps you prepare for change by identifying performance bottlenecks, rightsizing your environment, estimating software/device end-of-service/life, and evaluating your readiness to deploy advanced applications. We will also help you navigate the new vendor licensing models as the industry moves away from on-prem models to cloud and Software as a Service (SaaS) approaches. By highlighting these areas of concern within your environment, our comprehensive assessment will provide you the visibility you need to meet ever-expanding, always-shifting business demands.

ASSESSMENT DETAILS

Date/Time

What works for you and your team? Depending on your availability and requirements, we can conduct this Check as soon as possible.

Location

The assessment is conducted remotely through Quest's cloud-based assessment appliance.

Recommended Attendee Titles

If you are not the business owner and/or key decision maker, please ensure they are present for the report review; business operations/decisions are directly tied to technology requirements for most organizations. We recommend having these key team members present:

CIO CTO IT Management
CFO COO

Preferred Documentation to Review

We recommend having the following items ready for the Check, if possible:

Simple Network Management Protocol (SNMP) enabled

Subnet Range of an Internet Protocol (IP) network to be scanned

Timeline at a Glance

Pre-Assessment: Scheduling kickoff call, establishing priorities

Kickoff Call: Introductions, agenda, expectations

Install Meeting: Cloud-based appliance installed

Final Review: Quest provides an Executive Summary including recommendations and action items
