

We'll help you manage your IT so you can focus on growing your business:

Custom IT Services

Need to off-load your IT tasks to a state-of-the-art Cloud environment owned and operated by an expert provider? Quest's Cloud Services make it easy to be sure all your Cloud services are customized to fit your requirements, so you pay only for what you need.

Prefer to own your IT assets? Don't want to manage them? Quest's Managed Services relieve you of those burdens, whether your IT gear is located at your site or at one (or more) of ours.

Quest's IT Operations Services end the struggle: we integrate and streamline your various Cloud and Managed Services environments according to your goals and budget.

How Can We Help?™

Quest works seamlessly with your staff, systems, policies and procedures to achieve your IT goals. And our comprehensive portfolio of Cloud, Managed, and IT Operations Services can be augmented by our multi-disciplinary teams of Professional Services consultants, project managers, designers, engineers, and product specialists.

Quest's Cloud Services include:

- **Infrastructure-as-a-Service:** Streamline your IT environment, boost security, and reduce your IT capital outlays with Quest's virtualized, autonomic Cloud infrastructure.
- **Desktop-as-a-Service:** Deploy desktop images securely on virtually any device while avoiding the upfront costs and complexity of traditional desktop virtualization.

- **Data Protection/Security-as-a-Service:** Solve data leak problems and get encryption of emails and sensitive data as well as complete visibility into endpoint file and device activity.
- **Disaster Recovery/Business Continuity-as-a-Service:** Protect your business with real-time replication of your data and apps to a highly secure remote location of your choosing.
- **Messaging and Collaboration-as-a-Service:** Enable sophisticated real-time collaboration with leading-edge voice and HD video conferencing services.
- **Application Development/Test-as-a-Service:** Streamline application performance testing in an environment that simulates real-world conditions — without compromising day-to-day IT operations or the cost of scaling up your on-premise IT.

Quest's Managed Services include:

- **Network Monitoring and Management:** Get your existing network infrastructure optimized with services that provide total network visibility and proactive control.
- **Server/Application Monitoring and Management:** Ensure availability of critical servers and application resources with remote management, monitoring, and security capabilities.
- **Managed Security:** Let Quest cover your networks, servers, databases, and applications with 24/7 incident protection services.
- **Managed Messaging:** Protect against viruses and spam, enable policy-based archiving and retrieval of email and instant messages, and take the pain out of email migration and support.
- **Managed Remote Access:** Have Quest manage, monitor, and secure employee access to your corporate network via remote access technologies and mobile device management capabilities.

Quest's IT Operations Services

Always customized to address the particular needs of your business, Quest's IT Operations Services ensure your various Quest Cloud and Managed Services are properly integrated and functioning seamlessly.
