

Expect the unexpected...Will you be ready?

Disasters are beyond your control, but Disaster Recovery is not. Take the necessary measures to ensure your resilience against potential threats.

Disasters take various but equally threatening forms. Whether caused by a natural disaster or by a careless or tired employee, business-interrupting events wield damage and chaos — especially for businesses that are unmindful and unprepared. Armed with carefully tested processes and properly documented procedures however, businesses can avert peril and flourish.

Quest's **DR Preparedness Review** provides the tools and information necessary to bolster defenses against disaster. If subject to compliance requirements, interested in taking precautionary measures, or already impacted by disaster, your business can be better fortified and more resilient with a DR Preparedness Review.

Combining a risk assessment and business impact analysis, this review yields detailed discovery and practical insight. For approximately six to eight weeks, Quest's DR experts will conduct a series of thorough interviews to determine which applications, devices, and services are most critical to your productivity and gain an understanding of their ability to resume normal business operations following an event. Through collaborative weekly meetings, our experts will also uncover any gaps that may exist between recovery expectations and actual capabilities.

With Quest's DR Preparedness Review, you'll gain insight into the current state of your DR preparedness and better understand potential threats that can impact your organization. You'll also be equipped with the proper documentation to combat disaster, including: a comprehensive executive summary, a detailed BIA, and various options for addressing any discovered risks — priced to fit your needs, expectations, and budget.
