

# Quest High Availability Business Center

## HABC Roseville

Quest's Roseville HABC (one of over two dozen Global Service Delivery Centers) is strategically located at one of the most seismically stable and secure locations in California. It is uniquely situated in an area located well above the flood plain, clear of any mudslides or forest fires and far enough inland from extreme weather. The new data center is Tier 3 and SSAE 16 Type II compliant. With over 120,000 square feet of open floor space — state-of-the-art data center, business resumption center, or high availability office space — customers can tailor space of any size to meet their specific needs. This allows companies to establish a permanent on-site presence to take full advantage of the proximity to the center's redundant bandwidth and power capabilities.

### Distributed Redundant Power

Quest HABC Roseville features two utility power feeds, each at 12,000 Volts. Multiple diesel generators ensure continual power backup.

### Network Availability

Quest has eight top network providers with diverse underground entry to the HABC, creating an advanced fiber optic infrastructure.

### Onsite Support

Quest's onsite Network Operation Center at the Roseville HABC provides 24x7x365 support, monitoring, and remote hands.

### Cloud, Managed Services & Colocation

The Roseville HABC houses Quest's customized services, including infrastructure hosting, disaster recovery, data protection and security, and server/application monitoring and management. 40,000 sq ft of raised floor assures you of room for growth.

*"We are so much more at Roseville than just a cloud data center — more even than just a Business Resumption Center. Roseville is a multi-faceted facility where customers can permanently locate their compute-intensive operations such as call centers. We've designed Roseville so customers can customize their part of it to their specific requirements. Each customer decides what kinds of technologies they want to use and what kind of physical office space they need."*

— Tim Burke, President & CEO of Quest

## How Can We Help?™

**Invest in the Capability, not the Product®**
