

Security Intelligence & Monitoring

Managed Security

Real-time monitoring, information and reporting

Your network is changing. Cloud and virtual computing, mobility, video, VoIP and more are converging to create networks and WANs that are more complex and diverse than ever. But you can't put off business decisions until data can be gathered. You need real-time network & security reporting to make decisions that keep up with the speed of business today.

Flexible deployment

Quest's managed security monitoring & reporting can be installed on all major hypervisors as a soft appliance or as installable software for SUSE Linux and Red Hat. You also get flexible searching and event-forwarding which adapts to your environment – even a highly distributed network. In short, we have you covered no matter the type or complexity of your network.

Event Management

Quest's Managed Security offering employs a centralized event source management framework which enables data collection configuration, management, monitoring, patch management, and deployment on a wide variety of systems. Our data collecting works in conjunction with raw log data to parse information and deliver a complete picture of your environment. It then correlates, analyzes and compiles event data in a way that is easy to understand and use for remediation.

Anomaly Detection

You can't build alerts for problems if you don't know they exist. With Quest's Anomaly detection your network is monitored for anything out of the norm without having to know exactly what

you're seeing at the time. This makes it easy to identify new or unexpected trends, track them over time and not be caught unaware.

Key Features:

- **Anomaly detection:** Your network is monitored for anything out of the norm to identify new or unexpected trends/issues
- **Patch management as a service,** which includes the proactive and automatic detection, identification, application, and testing of appropriate patches
- **SIEM & log management** combined in a centralized view
- **With our real-time reporting** you'll be able to see how your security and compliance posture changes over time
- **Simplified search, filtering & reporting**
- **Pre-built reports and customizable policies** make reporting easy
- **Security reporting, event & log management:** one simple interface
- **Two-tier data storage:** Heavily indexed historical data for quick search/reporting in addition to real-time data collection & reporting

Key Benefits

- Fully monitored SIEM & log management analytics
- Fast search capabilities
- Simple report creation
- Real-time reporting and historical data form a comprehensive picture of your security posture
- Policy-driven, secure and compliant

Take the pain out of managing cloud, virtual and physical network security.
