

HD Video Conferencing with any device, at any time—made simple

HD Video Conferencing is a simple-to-use, Cloud-based HD multipoint conferencing experience that spans mobile, desktop, room systems, and immersive telepresence environments — and is easy to dynamically scale to your changing business requirements and growth. As more and more workers function remotely and travel budgets continue to shrink, the need for quality video conferencing from any device located anywhere has increased dramatically.

Answering the need with Cloud-based HD Video Conferencing

Quest's Cloud HD Video Conferencing solution reliably enables multiple face-to-face connections via widely available IP, 4G, and satellite channels to boardrooms, desktops, and mobile iOS, Android, and Windows devices.

Based on the latest SVC (Scalable Video Coding) standard, Quest's Cloud HD Video Conferencing Solution is designed to perform in lossy real-world network environments without need for pricey network upgrades or complicated bandwidth management.

Key Features:

- Telepresence video quality for multiple face-to-face connections
- Point-and-click simplicity on corporate and BYOD mobile devices, including iOS, Android, and Windows devices
- Intuitive web-based interface with self-service convenience creates a consistent, reliable user experience that connects seamlessly and is easy to use
- Connects any conference room, desktop, or mobile device with high-quality audio and high-definition video (up to 1440p/60fps with ultra-low latency) via standard broadband IP networks, including 4G wireless and satellite link
- Ability to host meetings and invite participants from any device
- Can use existing conference room systems to connect (Polycom, LifeSize, Tandberg, and Cisco)
- Easy to dynamically scale to hundreds of endpoints
- Can record meetings and broadcast them online
- Accessible to everyone via any IP device
- Affordable and simple to use

Collaborate as never before with affordable, quality, easy Cloud HD Video Conferencing
