

Don't put your security policy on the backburner

When a security policy is incomplete, out-of-date, misunderstood, or isn't adopted across an organization, critical data is dangerously at risk.

Do you know who your security expert is? Do you have a security policy? Do you understand how it's implemented, managed, enforced, and monitored? If you can't answer "yes" to all of these questions, it's time to take a closer look at what you have in place for your security policy.

The answers to these questions are key to the viability and resilience of your security policies and processes. You can't keep disasters from happening, but you can lessen their severity and execute a more nimble recovery if you have policies in place that are defined, clear, accepted, and up-to-date.

Whether you're starting from scratch, working with existing policies and procedures, or looking to update your current security policy, Quest can help. As part of Quest's **Security Policy Workshop**, our security experts sit down with you and walk through what a security policy is, what it entails, what it can do for you, and how to build one that fits the needs of your organization and its stakeholders.

It's not a firewall policy. And it's not an acceptable use policy. It's more than that – and it's critical.

Quest's Security Policy Workshop reviews:

- Acceptable use
- Firewall policy and deployment
- Points of data vulnerability
- Policies for vendors and consultants
- Guide for training employees and contractors on data protection
- Step-by-step execution process
- Evaluation guidelines
- Regulatory requirements

When it comes to information security, there are no guarantees, but identifying gaps and unanswered questions, and developing a plan to address them, can help keep your corporate data safe. If it's been more than one year since the last update to your security policy, or if you are relying on fragments of a policy to get you through a crisis, consider a Security Policy Workshop.

Save time and avoid heavy lifting – bring in Quest's experts for a Security Policy Workshop.
