

*No Matter Where in the World You Do Business:*

# Quest's Global Network of Service Delivery Centers

*Stands ready and able to help you!*

**Spanning the United States and reaching into both Asia and Europe, Quest's 24x7 Service Delivery Centers provide our many Cloud and Managed Services and IT operations capabilities.**

## Leading-edge security and performance

Operated by expert engineers and technicians, Quest's Service Delivery Centers provide an alternative to the limitations of traditional IT architectures.

The virtual machines, storage systems, and networks that run our Service Delivery Centers are always securely isolated and segmented. So your data is safe, its integrity is rigorously maintained, and both your data and access are protected without compromising workload performance.

## Increasing the velocity of your business

Quest's engineers can rapidly deploy applications and infrastructures using just the right resources. You won't struggle with the under-powered workloads or pay more for just-in-case capabilities you won't use.

Whether you need shared or dedicated hosting – or prefer a public, private, or hybrid Cloud – Quest's infrastructure and staff work together to deliver the efficiency your business requires.

## Every service delivery center houses...

- **Quest Cloud & Managed Services** – Infrastructure as a Service, Desktops as a Service, Data Protection/Security, Disaster Recovery/Business Continuity, HD Video Conferencing, Messaging & Collaboration, and Application Development/Testing
- **IT Operations Services** – monitoring and management of networks, servers, applications, and security that ensure proper integration and seamless functioning of clients' IT assets and operations
- **Business Resumption Center capabilities** that meet or exceed standards, so customers can continue operations after a disruption
- **Co-location facilities** for clients who elect to locate IT assets in secure, environmentally-controlled conditions

## Customizable IT Capabilities When & Where You Need Them

Quest offers an impressive range of flexible, scalable capabilities and services, all of which can be customized so you get exactly what you need when you need it
