

# Penetration Testing- Security Posture

If you want to create a truly secure IT infrastructure, it requires access to highly specialized experts to keep ahead of evolving risks. Engaging Quest's team of security experts can identify your organizational weaknesses using the same tools an outside attacker might implement. Leverage our expertise to identify and resolve your security issues and minimize risk.

After the tests are administered, we produce a comprehensive report that will outline our approach (including methodology and narrative of the testing process), summarize the findings, and recommend solutions to get your IT security infrastructure on the fast track to ultimate security. We look at each IT environment independently and then utilize a combination of customized security tests to ensure your company can withstand outside attacks on your IT infrastructure.

## KEY BENEFITS

- Accurately understand your company's security and risk profile
- Comply with information security best practices and industry regulations
- Provide comprehensive and relevant reports to leadership

### OUR SUITE OF CUSTOMIZED SERVICES INCLUDES

- Internal Systems (Intranet)
- External Systems (Internet-facing)
- Wireless Systems
- Applications (Including Mobile and Desktop)
- Social Engineering, Vishing, and Phishing Tests

**We use a wide-range of tools and methods to meet the demands of your company's unique security requirements:**

#### Internal Penetration Testing

We analyze vulnerabilities inside your Intranet systems to determine whether they can be used by an attacker.

#### External Penetration Testing

We identify security vulnerabilities for your Internet-facing systems to determine whether an attacker can gain access to sensitive information and compromise these systems.

#### Wireless Penetration Testing

We evaluate the security of your organization's wireless implementations and provide recommendations for improvement.

#### Application Penetration Testing

We have two primary objectives during this test: 1) to obtain unauthorized access, and 2) identify sensitive information within the application. Then, we will recommend solutions to fix the problems.

#### Mobile Application Penetration Testing

We analyze your storage and transport protection, error and exception handling, as well as authentication, authorization, data validation, and session management. We then recommend solutions to close any of the security gaps we uncover.

#### Social Engineering Testing

We will test and identify human reactions that can lead to security breaches in your security systems. With our suggestions, you can mitigate any security risks within your staff.

#### Phishing and Vishing Campaign Testing

A social engineering, phishing, and vishing campaign test will provide a vulnerability benchmark for employee training.

How can we help?®

*Invest in the Capability, not the Product®*
