Security Information and Event Management Technology (SIEM)

Cyber criminals are growing more sophisticated every year and increasingly value "slow and silent" data breaches over flashier tactics. Early threat detection and response is critical in today's challenging cybersecurity landscape. With Quest SIEM as a Service, we'll monitor your systems and identify potential threats and correlated incidents to help reduce your response time to targeted attacks and breaches.

Advanced Threat Protection and Compliance

SIEM systems have proven to be very effective in helping companies protect against advanced and persistent threats and remain compliant, but it's costly to stand up the infrastructure and resources needed to effectively implement, monitor, and manage logs.

An effective SIEM system can monitor millions of logs per day and query against those logs automatically. The security event data is pulled together in a centralized log requiring a considerable amount of bandwidth and storage to filter through thousands of actions and activities and determine whether they are correlated. And it also requires a trained 24/7 security staff to implement, monitor, and tailor the SIEM to target the most relevant activity patterns to determine if they pose a threat for your organization and industry.

SIEM has become one of, if not the, go-to cybersecurity solution in recent years, but it can prove cost prohibitive and overwhelming to organizations.

Quest Can Help

Quest SIEM as a Service saves you from the infrastructure expense and improves the speed and accuracy of incident detection and response time to targeted attacks and breaches. There's no software to purchase, cyber security professionals to hire, or additional training needed to bring staff up to speed.

Our experts handle the large-ticket items and the day-to-day SIEM operations on a subscription basis. We can readily adapt to the client environments and deliver the true "actionable intelligence" necessary to quickly understand your threat posture and prioritize response.

Quest SIEM as a Service Features

- Detect new threats quickly and easily
- Real-time event log correlation
- Integrated compliance management
- Augmented threat intelligence
- Audit network devices
- In-depth application auditing

In addition to SIEMaaS, Quest can customize your solution with these options:

- Log storage services beyond the 1TB that is included
- Data replication (second copy) services
- Configuration of backups and end-points
- Security, firewall, and ACL configuration review
- Incident response and remediation services
- Data and/or application migration services
